

Yasin Torres-Tiji

yasin.torres-tiji@mines.edu yasintorrestiji@gmail.com

Professional Summary:

Algal synthetic and systems biologist with end-to-end expertise spanning genomic analysis, gene design, transformation, bioreactor operation, and multi-omics characterization. Currently engineering *Picochlorum celeri* at the systems level as a postdoctoral scholar at Colorado School of Mines, with active collaborations across DOE national laboratories (PNNL, LANL, NLR, EMSL). PI on a DOE/EMSL campaign integrating transcriptomics, proteomics, and metabolomics to build predictive genome-scale metabolic models of algal productivity. Seeking faculty, PI, or staff scientist positions.

Education

University of California San Diego

Division of Biological Science
Ph.D. Molecular Biology - 2021

Autonomous University of Barcelona

B.S. Biotechnology – 2015

Additional Education

University of California San Diego

MicroMBA Program — 2023

Business analytics, corporate finance, marketing, operational strategy, and leadership.

National Center for Genome Resources

Differential Gene Expression Workshop — 2025

RNA-seq experimental design, read alignment, statistical analysis with DESeq2, and pathway enrichment.

Codecademy

Learn Python 3 — 2026

Programming fundamentals, data structures, control flow, functions, and file handling in Python.

Research Interests

Algal synthetic & systems biology · Genetic engineering · Multi-omics integration & genome-scale metabolic modeling · Bioreactor process engineering & climate simulation · Photosynthetic carbon metabolism & partitioning · Sustainable bioproduction & bioeconomy · AI/ML-assisted bioinformatics

Dissertation: “Optimizing recombinant protein production in *Chlamydomonas reinhardtii*: turning a model organism into a commercially relevant biotechnological host

Performed research in recombinant protein production in microalgae with expertise throughout the whole process: gene design, gene cloning, microalgal transformation with heterologous DNA, microalgal culturing, recombinant protein detection, recombinant protein purification and

analysis. Focused on the optimization of two crucial elements of the process: improvement of recombinant protein production at single cell level by developing advanced genetic tools, and improvement of recombinant protein production by increasing the cell density in a heterotrophic bioreactor.

Skills

Molecular & Synthetic Biology

- End-to-end recombinant protein production: codon-optimized gene design, expression vector assembly, algal/bacterial transformation, high-expression clone selection, bioreactor scale-up, and protein purification.
- Gene design, molecular cloning, PCR, RT-qPCR, and nucleic acid extraction/purification.
- Genome editing (CRISPR), transgenesis, and cis-regulatory element identification in photosynthetic organisms.
- Western blot, chromatography, FPLC, ELISA, and mass spectrometry-based protein characterization.

Multi-Omics & Bioinformatics

- RNA-seq: experimental design, library preparation, STAR alignment, featureCounts, DESeq2 differential expression analysis, GO/KEGG pathway enrichment.
- TMT quantitative proteomics: LC-MS/MS data processing via FragPipe/MSFragger, limma-based differential expression analysis, TMT-Integrator for ratio quantification.
- Ubiquitination proteomics: site-level quantification and differential analysis (5,660+ sites), protein-abundance normalization, condition-specific detection workflows.
- Metabolomics: LC-MS (HILIC) and GC-MS data interpretation and integration.
- Genome annotation: multi-source pipelines integrating CLEAN, InterProScan, SwissProt BLAST, and eggNOG-mapper for functional characterization of non-model organisms.
- Genome-scale metabolic model construction and constraint-based analysis.
- Proficient in R and Python for bioinformatic analysis, statistical computing, and data visualization. Working environment: WSL2 Ubuntu with conda-managed pipelines (STAR, fastp, BLAST+, Diamond, samtools, bedtools).
- NGS data analysis, genome assembly, and variant calling using command-line tools and Galaxy.
- Flow cytometry experimental design and data analysis (FlowJo).

Analytical Chemistry

- FAME extraction and fatty acid profiling by GC-FID.
- ELISA-based protein quantification.
- Mass spectrometry data analysis and interpretation (LC-MS/MS, GC-MS).

Microscopy & Microbial Culturing

- Optical, fluorescence, and confocal microscopy.

- Microalgal cultivation across scales: agar plates, flasks, open pond systems, and photobioreactors.
- Microbial identification via 16S/ITS/18S sequencing, metagenomics, and whole-genome sequencing.
- Sterile technique and contamination-free culture maintenance.

Bioreactor Process Engineering

- Design, operation, and media optimization of batch and semi-continuous bioreactor systems.
- Mastery in operating climate-simulated photobioreactors for generating reproducible growth data under controlled light, temperature, and CO₂ regimes.
- Process optimization for biomass titer and recombinant protein yield.

Communication, Mentorship & Project Management

- PI on DOE/EMSL CAM campaign; experienced in grant writing, project planning, and execution.
- Mentored 15+ undergraduate students and 4 graduate students.
- Effective communicator of complex scientific concepts to technical and non-technical audiences.
- Peer reviewer for 9 journals including Microbial Cell Factories, Food Bioscience, PLOS ONE, and Frontiers in Plant Science.

Professional Experience

Postdoctoral Fellow - Posewitz Lab

Colorado School of Mines, Department of Chemistry, Golden, CO

July 2024 – Present

- Performing research in algal synthetic biology and algal bioprocess engineering to enhance the cost competitiveness of algal bioproducts.

Postdoctoral Scholar - Mayfield Lab

University of California San Diego, Division of Biological Sciences, La Jolla, CA

October 2021 – June 2024

- Performed research in synthetic biology to create genetic tools that perfect our capacity to genetically engineer microalgae for the improved production of biofuels, bioplastics precursors, food and therapeutics.
Technical achievements: Successfully identified a series of DNA cis-regulatory elements using bioinformatics analysis, significantly enhancing transgene expression. When integrated into a minimal promoter, these elements not only matched but surpassed the efficacy of current state-of-the-art genetic tools in synthetic promoter design.

PhD Student - Mayfield Lab

University of California San Diego, Division of Biological Sciences, La Jolla, CA

September 2015 – September 2021

- Performed research developing genetic tools to improve transgene expression in the nuclear genome of *Chlamydomonas reinhardtii* and advanced the field of recombinant protein production in bioreactors using algae.
Technical achievements: 2-fold improvement on biomass yield in a bioreactor, 3-fold improvement on recombinant protein titers compared to highest reported in the literature. Novel genetic tool producing a 10-fold improvement in transgene expression compared to state of the art.

Research Assistant - Mayfield Lab

University of California San Diego, Division of Biological Sciences, La Jolla, CA

January 2015 – June 2015

- Performed research developing genetic tools for recombinant protein production in the algal chloroplast of *Chlamydomonas reinhardtii*.

Research Assistant

Center for Research in Agricultural Genomics (CRAG), Barcelona, Spain

August 2012 – May 2014

- Performed research revolving the genetic regulation of lignin formation in corn to make second generation biofuels more economically viable.

Funding & Awards

U.S. Department of Energy (DOE) - Environmental Molecular Sciences Laboratory (EMSL)

Grant No. 62132 (Feb 2026–Present)

Project: Genome-Scale Modeling of *Picochlorum celeri* to Elucidate CO₂-Dependent Extreme Growth and Carbon Partitioning in Algae

Richland, WA, USA. DOI: 10.46936/camc.proj.2026.62132/60015765

Role: Principal Investigator

Grant Banco Santander Formula 2014/2015 (5000 EUR award for studying abroad - 1 out of 3 recipients for the Autonomous University of Barcelona)

University of California Education Abroad Program 2014/2015 (1 out of 25 recipients for the Autonomous University of Barcelona)

Frontiers of Innovation Scholars Program 2016/2017 (25,000 USD fellowship University of California San Diego)
